

TBS Southeast required a system that would provide GPS tracking to more efficiently dispatch mobile technicians to various, often remote, locations. Vinformatix provided an innovative solution that leveraged the native GPS capacity of smartphones with online mapping services(Google Maps).

The solution included:

- **Mobile application for both Apple and Android devices**
- **Real-time locations of all active technicians**
- **Easy toggling on touch screen monitors**
- **between various locations and personnel**
- **Powerful back-end database access delivered through a custom web portal**
- **Simple user interface allowing technicians to easily activate and deactivate the tracking functionality**
- **Complete management of store / vendor locations and technician profile data via admin portal, including:**
Real-time locations of all active technicians
Easy toggling on touch screen monitors between various locations and personnel
